Chapter 6

Anatolian Arabic

Faruk Akkuş
University of Pennsylvania

This chapter investigates contact-induced changes in Anatolian Arabic varieties. The study first gives an overview of the current state and historical development of Anatolian Arabic. This is followed by a survey of changes Anatolian Arabic varieties have undergone as a result of language contact with primarily Turkish and Kurdish. The chapter demonstrates that the extent of the change varies from one dialect to another, and that this closely correlates with the degree of contact a dialect has had with the surrounding languages.

1 Current state and historical development

Anatolian Arabic is part of the so-called qəltu-dialect branch of the larger Meso-potamian Arabic, and essentially refers to the Arabic dialects spoken in eastern Turkey.\(^1\) In three provinces of Turkey – Hatay, Mersin and Adana – Syrian sedentary Arabic is spoken (see Procházka, this volume, for discussion of these dialects). Other than these dialects, in Jastrow’s (1978) classification of Meso-potamian qəltu dialects, Anatolian Arabic dialects are subdivided into five groups: Diyarbakır dialects (spoken by a Jewish and Christian minority, now almost extinct); Mardin dialects; Siirt dialects; Kozluk dialects; and Sason dialects. In his later work, Jastrow (2011a) classifies Kozluk and Sason dialects under one group along with Muş dialects – investigated primarily by Talay (2001; 2002). The two larger cities where Arabic is spoken are Mardin and Siirt, although in the latter Arabic is gradually being replaced by Turkish.

---

\(^1\)This group represents an older linguistic stratum of Mesopotamia as compared to the gələt dialects. The terms qəltu vs. gələt dialects are due to Blanc (1964), who distinguished between the Arabic dialects spoken by three religious communities, Muslim, Jewish, and Christian, in Baghdad. He classified the Jewish and Christian dialects as qəltu dialects and the Muslim dialect as a gələt dialect, on the basis of their respective reflexes of Classical Arabic qultu ‘I said’.
The linguistic differences between these various Arabic-speaking groups are quite considerable. Thus, given the low degree of mutual intelligibility, speakers of different varieties resort to the official language, Turkish, to communicate. Jastrow (2006) reports an anecdote, wherein high school students from Mardin and Siirt converse in Turkish, since they find it difficult to understand each other’s dialects. Expectedly, mutual intelligibility is at a considerably higher level among different varieties of a single group, despite certain differences. For instance, speakers of Kozluk and Muş Arabic have no difficulty in communicating with one another in Arabic.

The existence of Anatolian dialects closely relates to the question of the Arabization of the greater Mesopotamian area. Although the details largely remain obscure, a commonly-held view is that it took place in two stages: the first stage concerns the emergence of urban varieties of Arabic around the military centers, such as Basra or Kūfa, during the early Arab conquests. Later, the migration of Bedouin dialects of tribes added another layer to the urban dialects (see e.g. Blanc 1964; Versteegh 1997; Jastrow 2006 for discussion). According to Blanc (1964), the qəltu dialects are a continuation of the medieval vernaculars that were spoken in the sedentary centers of Abbasid Iraq. Blanc (1964) also noted that the qəltu dialects did not stop at the Iraqi–Turkish border, but in fact continued into Turkish territory. He mentioned the towns of Mardin and Siirt as places where qəltu dialects were still spoken.

Despite being a continuation of Mesopotamian dialects, Anatolian dialects of Arabic have been cut off from the mainstream of Arabic dialects. How exactly this cut-off and separation between dialects happened, given the lack of specific barriers, is largely unknown and remains at a speculative level. Regarding this topic, Procházka (this volume) suggests “the foundation of nation states after World War One entailed significant decrease in contact between the different dialect groups and an almost complete isolation of the Arabic dialects spoken in Turkey”.

Like Central Asian Arabic and Cypriot Maronite Arabic (Walter, this volume), Anatolian Arabic dialects are characterized by: (i) separation from the Arabic-speaking world; (ii) contact with regional languages, which has affected them strongly; and (iii) multilingualism of speakers.

The Anatolian dialects have diverged much more from the Standard type of Arabic compared to the other qəltu dialects, such as the Tigris or Euphrates groups (Jastrow 2011b). One of the hallmarks of Anatolian Arabic is the suffix -n instead of -m in the second and third person plural (e.g. in Mardin Arabic baytkən ‘your (pl) house’, baytən ‘their house’) and the negation mō with the imperfect. In
addition to many interesting properties like the ones just mentioned, Anatolian Arabic has acquired a large number of interesting contact-induced patterns.

These dialects are spoken as minority languages by speakers belonging to different ethnic or religious groups. As noted by Jastrow (2006), not all of the Anatolian Arabic varieties are spoken in situ however, and in fact some may no longer be spoken at all. Jastrow notes that some of the dialects were exclusively spoken by Christians and almost died out during World War One as a result of the massacres of the Armenians and other Christian groups. A few thousand speakers of these dialects survive to this day, most of whom have migrated to big cities, starting from the mid-1980s, particularly Istanbul. Some speakers of these dialects also live in Europe. Nevertheless, these dialects are very likely to face extinction in a few decades.

The Jews who spoke Anatolian Arabic varieties (mainly in Diyarbakır, but also in Urfa and Siverek; cf. Nevo 1999) migrated to Israel after the foundation of the State of Israel in 1948. These dialects also face a serious threat of extinction.

Today Anatolian Arabic dialects are predominantly spoken by Muslims (although there are a few hundred Arabic-speaking Christians, particularly in some parts of Istanbul, such as Samatya). These dialects are still found in situ, however they are also subject to constant linguistic pressure from Turkish (the official language) and Kurdish (the dominant regional Indo-Iranian language), and social pressure to assimilate. The quote from Grigore (2007a: 27) summarizes the overall context of Anatolian Arabic: “il se situe dans un microcontexte kurde, situé à son tour dans un macrocontexte turc, étant isolé de la sorte de la grande masse des dialectes arabes contemporains.”

The total number of speakers is around 620,000 (Procházka 2018: 162), most of whom are bi- or trilingual in Arabic, Kurdish and Turkish. As Jastrow (2011a: 88) points out, the phenomenon of diglossia is not observed in Anatolia; instead Turkish occupies the position of the ‘High variety’, and Anatolian Arabic, the ‘Low variety’, occupies a purely dialectal position. In addition, speakers of different dialects may speak other minority languages as well. For instance, a considerable number of Sason Arabic speakers know the local variety of the Iranian language Zazaki, and those of Armenian origin speak an Armenian dialect.

Anatolian Arabic varieties are in decline among the speakers of these varieties, and public life is dominated primarily by Turkish (and Kurdish). The presence of Arabic in Turkey has increased due to Syrian refugees who fled to Turkey, yet this increased presence primarily concerns Syrian Arabic, rather than Anatolian Arabic (see Procházka, this volume). In addition to the absence of awareness about

---

2“It is situated in a Kurdish microcontext, which is in turn situated in a Turkish macrocontext, thus being isolated from the vast majority of contemporary Arabic dialects.”

137
Anatolian Arabic dialects in the Arab states, the Anatolian dialects also suffer from a more general lack of interest. The speakers generally do not attribute any prestige to their languages, calling it “broken Arabic”, and often making little effort to pass it on to the next generations. It should, however, be noted that there has been increasing interest in these dialects in recent years, especially at the academic level. To this end, several workshops have been organized at universities in the relevant regions, aimed at promoting these dialects and discussing possible strategies for their preservation.

The data referenced in this chapter come from various Anatolian Arabic dialects. The name of each variety and its source(s) are as follows: Āzəḥ (Wittrich 2001); Daragözü (Jastrow 1973); Ḥapəs (Talay 2007); Hasköy (Talay 2001; 2002); Kinderib (Jastrow 1978); Mardin (Jastrow 2006; Grigore 2007b; Grigore & Biţună 2012); Mutki-Sason (Akkuş 2016; 2017; Isaksson 2005); Siirt (Biţună 2016; Grigore & Biţună 2012); Tillo (Lahdo 2009).

2 Contact languages

2.1 Overview

Anatolia, especially the (south)eastern part, has been home to many distinct linguistic groups (as well as ethnic and religious groups). Up until the beginning of the twentieth century, speakers of the largest Anatolian languages – Kurdish, Zazaki, Armenian, Aramaic and Arabic – had been co-existing for almost a thousand years. This has naturally resulted in extensive contact among these languages.

Contact influence on Anatolian Arabic has arisen mainly through long-term bi- and multi-lingualism rather than through language shift (in which speakers of other languages shifted to Arabic; Thomason 2001).3 As a result, when applicable, the changes seem to be primarily through borrowing, rather than imposition (in the sense of Van Coetsem 1988; 2000).

2.2 Turkish

Turkish, as the official language of Turkey, currently dominates public life in most Arabic-speaking areas. However, as noted by Haig (2014: 14), “the current omnipresent influence of Turkish in the region is in fact a relatively recent phenomenon, fueled by compulsory Turkish-language state education, the massmedia, and large-scale military operations carried out by the Turkish army in the

---

3But note also the case of the Mhallamiye near Midyat, who most likely were Aramaic speakers and shifted to Arabic after adopting Islam as their religion (thanks to Stephan Procházka for bringing this to my attention).
conflict against militant Kurdish groups. But prior to the twentieth century, the influence of Turkish in many parts of rural east Anatolia was negligible.”

Although Turkish is the dominant language in the public sphere, there are still many people, particularly in rural parts of (south-)eastern Turkey, who do not speak Turkish, including speakers of Anatolian Arabic varieties. It is usually women over forty years old that fall into this category. They tend to speak the local Arabic variety along with the dominant language in that geographic area.

Moreover, the amount of Turkish influence is greater on the Arabic speakers who have migrated to bigger cities such as Istanbul, compared to those who still speak their dialects in situ.

2.3 Kurdish and Zazaki

Anatolian Arabic has been in intensive contact with two Western Iranian languages: Kurmanji Kurdish and Zazaki. These languages have influenced each other on different levels. As noted by Procházka (this volume) and Öpengin (this volume), Kurdish and Arabic, including the region of south-eastern Anatolia, have experienced extensive contact since at least the tenth century.

Due to the multi-ethnic (and to a lesser extent multi-religious) nature of the regions, bilingualism between Arabic and Kurdish (or Zazaki) is very widespread. The speakers of the non-dominant languages tend to have a stronger command of the dominant languages than the reverse situation. For instance, in Mutki, Bitlis province, where Kurdish is the dominant regional language, Arabic speakers have a native-like command of Kurdish, whereas not many Kurdish speakers speak the local Arabic variety. In some parts of Sason, Batman province, on the other hand, Arabic is the dominant language, and Kurdish speakers learn Arabic as a second language.

2.4 Aramaic

Aramaic and Arabic have for centuries lived side by side, so that it is possible to speak of both substrates (from Syriac/Neo-Aramaic to Arabic), and of adstrates, or rather, of superstrates (from Arabic to Aramaic). In the context of Anatolian Arabic, Aramaic has been in contact mainly with the Mardin dialect group.

These two languages have influenced each other in many ways. For instance, the many dialects constituting Modern Eastern Aramaic show considerable diversity as to choice of verbal particles. Some dialects use particles similar in form and function to those of the qaltu-dialects (see e.g. Jastrow 1985; as well as Coghill, this volume, for North-Eastern Neo-Aramaic dialects).
Finally, it is worth mentioning that, given the existence of Arabic speakers of Armenian origin, Armenian might have influenced certain Anatolian Arabic varieties. However, the influence of Armenian is hardly known, apart from the fact that many villages in the further eastern part of Anatolia, in which Arabic was spoken or is still spoken, bear Armenian names. This requires further investigation in its own right.

3 Contact-induced changes in Anatolian Arabic

Anatolian Arabic dialects manifest considerable variation, and have also come to exhibit interesting patterns due to language contact in every linguistic aspect. This section surveys these changes and features in turn.

3.1 Phonology

Anatolian Arabic has undergone significant changes in its consonant and vowel inventories due to language contact (as well as language internal developments). These changes include the introduction of new consonantal phonemes, loss or weakening of emphatic consonants, and introduction of new vowels. In addition to these changes, it is possible to count word-final devoicing as a contact-induced change.

This section first introduces the consonant inventory in varieties of Anatolian Arabic. It should be noted that not all consonants are present in every variety, but the chart serves as the sum of consonants available across Anatolian Arabic varieties. For instance, the phonology of Sason Arabic (and other varieties of the Kozluk–Sason–Muş group) is characterized by the (near) absence of pharyngeal and emphatic (pharyngealized) consonants, which have fused with their plain counterparts, e.g. *pasal* ‘onions’ in Sason < Old Arabic (OA) *başal*.

Table 1, with information largely taken from Jastrow (2011a), demonstrates that Anatolian Arabic has several consonants that were originally alien to Arabic (see §3.1.1 for discussion). With respect to the inventory of vowels, the noteworthy development is the introduction of /ē/ and /ō/ for some lexical items. Note that

---

4These sounds, whose emphatic quality is indicated in Table 1 and throughout with a subscript dot are only nearly absent for two reasons: (i) it is possible to detect them in the speech of elderly speakers in some lexical items, while the younger generations have lost them, (ii) Talay (2001) reports their availability in Hasköy, Muş province to a certain extent.

5Compare Cypriot Maronite Arabic (Walter, this volume), Maltese (Lucas & Čéplô, this volume) and Nigerian Arabic (Owens, this volume).

the Old Arabic diphthongs *ay and *aw have largely been preserved in these varieties: Jastrow (2011a: 89) notes that one of the processes by means of which these mid long vowels entered the inventory of Anatolian Arabic is via loanwords from Turkish and Kurdish, e.g. commonly used items, čōl ‘desert’, tēl ‘wire’ (Turkish, probably through the intermediary of Kurdish), ḫōrt ‘young man’ (Kurdish).

3.1.1 New phonemes /p, č, ž, g, v/

The Anatolian Arabic varieties, as well as the varieties in (northern) Syria and Iraq, have certain phonemes that were not originally familiar to these varieties of Arabic. These phonemes include the voiceless bilabial stop /p/, the voiceless affricate /č/, the voiced post-alveolar fricative /ž/, the voiced velar stop /ɡ/, and the voiced labiodental fricative /v/. The emergence of these phonemes is most likely due to the massive contact with Turkish, Kurdish and Aramaic. That is, the most likely scenario is that the centuries-long borrowing of words which contained these sounds ultimately resulted in them getting incorporated into the phonemic inventory.

---

6 Cf. Jastrow (2011a) and Grigore & Biţună (2012) regarding the status of /ž/: this sound is largely restricted to borrowed words. The reflex of Arabic 〈ژ〉 in Anatolian Arabic is /ǧ/.

7 Blanc (1964: 6–7) considers /p/ and /č/ as characteristic of Mesopotamian varieties.
Faruk Akkuş

With regard to /v/, it is likely that there are two paths of emergence: (i) as an internal evolution of the voiced interdental fricative /ð/ and (ii) via loan-words from Turkish and Kurdish. The forms vīp and zīp ‘wolf’ (cf. OA ḏiʔb ‘wolf’) represent a language internal development, whereby the interdental fricatives have shifted to sibilants in Kozluk–Sason–Muş, and to labiodental fricatives in Āzəx (Şırnak province, Wittrich 2001), whereas they have been retained in most Mardin group dialects.\(^8\)

In many cases, it is impossible to pinpoint which language these sounds were (initially) borrowed from. However, as also noted in Procházka (this volume), /p/ was probably introduced via contact with Kurdish, followed by influence from Ottoman and Modern Turkish.\(^9\) Some illustrations are as follows:

(1) pīs ‘dirty’, cf. Kurdish/Turkish pîs, pis
    parçāye ‘piece’, cf. Turkish parça
    pûz ‘nose’ (Hapəs), cf. Kurdish poz
    davare ‘ramp’, cf. Kurdish dever fem. ‘place’
    čuvâle ‘sack’, cf. Turkish çuval
    pêlav (Hasköy) ‘shoe’, cf. Kurdish pêlav
    čāy ‘tea’, cf. Turkish çay
    çaqmâq ‘lighter’, cf. Turkish çakmak
    rênçbarî (Hasköy), rêçbarî (Sason) ‘husbandry’, cf. Kurdish rêncberî
    žîžo (Āzəh) ‘hedgehog’, cf. Kurdish jîjo
    tāži ‘greyhound’, cf. Kurdish tajî
    gömlak ‘shirt’, cf. Turkish gömlek
    magzûn, mazgûn (in Sason) ‘sickle’, cf. Syriac magzûnâ; Țuroyo magzûno

Talay (2007) suggests that the loss of the phonemic status of the emphatic consonants and the weakness of the pharyngeal in Kozluk–Sason–Muş group is likely due to the influence of Turkish, which does not have them. Examples are from the Hasköy dialect, and are taken from Talay (2007: 181):

(2) ata ‘he gave’ (< *ʔaʕṭā), cf. adâ in Sason
    sēbi ‘boy’ (< *šabiyy)
    zarab ‘he hit’ (< *ḍarab < *ḍarab)

Thus, changes of this kind can be seen as a quasi-adaptation of the consonant inventory to that of the superstrate and adstrate languages.

\(^8\) For more discussion, see Wittrich (2001), Jastrow (2011a), Grigore (2007b), Talay (2011), Akkuş (2017), and Biţună (2016) among others.

\(^9\) For further illustrations and discussion, see e.g. Vocke & Waldner (1982), Jastrow (2011a), Talay (2002; 2007) and Grigore & Biţună (2012).
3.1.2 Word-final devoicing

Certain voiced stops in Anatolian Arabic /b, d, ġ, g/ have a tendency to become devoiced [p, t, č, k] when they occur word-finally, probably due to Turkish influence, which is well-known for this property.

For instance, /b/ is mainly realized as the voiceless [p] in final pre-pausal position, e.g.: anep ‘grape(s)’, cf. OA ʕinab; yarip ‘stranger’, cf. OA yarib. This might reflect a change in progress, as Lahdo (2009) points out that the incidence of devoicing in other Anatolian dialects is also increasing over time. Note that the devoicing process does not take place in all instances, supporting the claim that the language is undergoing a transition in this regard. Moreover, the lack of a written form removes a possible brake on this process. Further illustrations are as follows:

(3) axa[θ] ‘he took’
    kata[p] ‘he wrote’ (Mardin; Jastrow 2011a: 90)
    ktē[p] ‘book’ (Mardin), cf. OA kitāb
    baʕī[t] ‘far’ (Āzəḥ), cf. OA baʕīd
    atya[p] ‘nicer’ (Tillo), cf. OA ʔat yab
    azya[t] ‘more’, cf. OA ʔazy ad (Lahdo 2009: 106)

Devoicing is not limited to word-final position, however, but is also attested before voiceless consonants, e.g. haps ‘prison’, cf. OA habs.

3.2 Morphology

The influence of language contact is also observable in the domain of morphology. For example, as discussed by Prochazka (2018: 182–183), the numerals 11–19 in the Kozluk–Sason region show inversion of the unit and decimal positions, e.g. fašra sotte (and not sott fašra) ‘sixteen’. See also Procházka (this volume) for discussion of the personal pronouns.

Some other cases of contact-induced changes such as reduplication, degree in adjectives and compounds are discussed below.

3.2.1 Reduplication

A type of reduplication due to contact with Turkish produces doublets with /m/. The consonant /m/ may be added initially to vowel-initial words, as in (4a), or replaces the initial consonants in consonant-initial words, as in (4b) (see Akkuş 2017; Lahdo 2009). The reduplication conveys vagueness, with a meaning paraphrasable with ‘et cetera’ or ‘something like that’.
Faruk Akkuş

(4) Sason Arabic
   a. ažīn m-ažīn
dough → m-dough
   ‘dough or something like that’
   b. hās m-ās lā təso
sound → m-sound NEG make
   ‘Don’t make any noise!’ (Lit. ‘Don’t make sound or something like that.’)

Following the same restriction in Turkish, if a word starts with /m/, this type of reduplication is disallowed, e.g. māse ‘table’ cannot be reduplicated in a way that would result in māse māse.

3.2.2 Degree in adjectives

Adjectives in Anatolian Arabic follow the noun directly, agreeing with it in gender, number, and definiteness. In this respect, the situation is similar to most Arabic varieties. Degree, on the other hand, is not an inflectional category in Sason Arabic. Instead, this dialect has adopted the Turkish adverbs daha ‘more’ and en ‘most’ for comparative and superlative, respectively. Both these items precede the adjectival constituent, as shown in (5a) and (5b).

(5) Sason Arabic
   a. mənn-i daha koys-e ye
      from-OBL.1SG more beautiful-F COP.3SG
      ‘She is more beautiful than me.’
   b. en gbīr
      most big
      ‘the biggest’

The Tillo variety also uses the Turkish-derived an ‘most’ in superlative forms, with both Arabic-derived adjectives (in the elative form) and Turkish-derived adjectives (which lack an elative form), as in (6a) and (6a) respectively.

(6) Tillo Arabic (Lahdo 2009: 198)
   a. an¹⁰ atyap
      most delicious.ELA
      ‘the most delicious’
   b. an yāqən
      most close
      ‘the closest’

On the other hand, the comparative in the Tillo variety is formed through the elative alone (which functions in other Arabic varieties as both comparative and superlative). The standard of comparison is introduced by the preposition *man* ‘from’.

(7) Tillo Arabic (Lahdo 2009: 162)

\[
\begin{align*}
tallo & \text{ iy } \text{ atyap } \text{ man } \text{ aṣṭanbūl} \\
& \text{Tillo cop.3sg good.Ela than Istanbul} \\
& \text{‘Tillo is better than Istanbul.’}
\end{align*}
\]

3.2.3 Derivational affixes

Through numerous loanwords, a few derivational suffixes have been introduced into Anatolian Arabic. These suffixes include the agentive morpheme -ǧi/-či, and the abessive suffix -səz, which translates as ‘without’. Ingham (2011: 178) points out that these suffixes, especially the former, are also found in the dialects of Iraq, Syria, and elsewhere (see also Procházka-Eisl 2018 for further details).

(8) a. Sason Arabic

\[
\begin{align*}
gahwa-ǧi \\
coffee-AGT
& \text{‘coffee maker’}
\end{align*}
\]

b. Sason Arabic

\[
\begin{align*}
vīgdan-səz \\
conscience-ABESS
& \text{‘unconscientious’}
\end{align*}
\]

c. Tillo Arabic (Lahdo 2009: 199)

\[
\begin{align*}
kəlla kānu & \text{ mṭahhər-či-yye} \\
& \text{be.PRF.3PL circumcizer-AGT-PL}
& \text{‘They all were circumcizers.’}
\end{align*}
\]

The presence of these suffixes on lexemes of the local Arabic varieties, e.g. ḥāser-ǧi ‘yogurt maker, yogurt seller’ (Sason Arabic) or mṭahhər-či ‘circumsiser’ (Tillo Arabic), suggests that the forms above are not necessarily adopted as a whole. Rather, Arabic speakers may decompose the word and apply the suffix to other lexemes in some cases.
3.2.4 Compounds

Anatolian Arabic has borrowed the N+N compounding strategy from Turkish, where the right-hand member carries the compound linker morpheme -i. This pattern is not generally found in other varieties of Arabic and it is most likely due to contact with Turkish. This type of compound is often used with whole Turkish phrases. The examples are as follows (note that the buffer consonant -s appears between the linker morpheme and the noun when the noun ends in a vowel):

(9) Sason Arabic (Akkuş & Benmamoun 2018: 41)
   a. lisa mudur-i
      high_school director-LINK
      ‘high school director’
   b. qurs oratman-i
      course teacher-LINK
      ‘course teacher’

(10) Tillo Arabic (Lahdo 2009: 199)
    fəstəq fabriqa-si
    pistachio factory-LINK
    ‘pistachio factory’

This compounding strategy is found in other Arabic varieties spoken in Turkey as well, for instance, buz dolab-i ‘refrigerator’ (lit. ‘ice cupboard-LINK’) in the Adana dialect. Whether compounding has been borrowed as a productive process as opposed to borrowing of the whole phrase requires further investigation.11

3.2.5 Vocative ending -o

Another morphological feature that Anatolian Arabic has acquired is the vocative particle -o. When addressing a person directly, -o is commonly affixed to kinship terms and given names. This appears to be available in the whole area. Unlike the situation in Syria and Iraq (see Procházka, this volume), this form of address is not usually used hypocoristically. Some examples are below:

(11) amm-o ‘(paternal) uncle!’
    ğemāl-o ‘Cemal!’
    ḥāl-o ‘(maternal) uncle!’

11 Thanks to Stephan Procházka for the discussion and the example from the Adana dialect.
The corresponding forms of feminine nouns end in -ē, as in habibt-ē ‘darling!’.
Grigore (2007a: 203) suggests that this vocative -ē is borrowing of a morphologi-
cal form from Kurdish (cf. Haig & Öpengin 2018), since the suffix, with masculine
and feminine forms, is not historically available in Arabic. Note, however, the
existence of cognates in other Semitic languages and -u in the whole of North
Africa, where Kurdish influence is not likely (see Prochazka, this volume).

In brief, contact with Turkish and other neighboring languages has led to var-
ious noticeable changes in the morphology of Anatolian Arabic, particularly the
more easterly varieties.

3.3 Syntax

Research on the syntax of Anatolian Arabic varieties, let alone work on contact-
induced syntactic changes, lags significantly behind the research conducted on
other aspects of these languages. Several factors might have contributed to this
situation. Researchers’ tendency to focus on phonological or lexical aspects and
the lack of sufficient data from which to draw conclusions are two possible fac-
tors. Another possibility that Ingham (2005) raises for contact-induced syntactic
change is that since the languages in contact are so typologically different, it is
difficult for them to adopt syntactic features from each other without extensive
language change taking place.

This section introduces several syntactic phenomena that can be attributed to
language contact, including copulas, marking of indefiniteness, light verb con-
structions and the periphrastic causative. Although the details are not elabor-
ated on here, the conclusion we can arrive at is in line with Ingham (2005), in
that the degree and intensity of contact with the neighboring languages leads
to differences among Anatolian Arabic dialects. The more easterly varieties, e.g.
the Kozluk–Sason–Muş group, appear to be the most innovative, and the dialect
group(s) most influenced by the language contact, whereas the Mardin group
appears to be the most conservative (see Akkuş 2017; Jastrow 2011a for further
discussion).

3.3.1 Copula

One of the most distinctive features of Anatolian Arabic is the existence of the
copula in nominal sentences, based on the independent pronouns. This copula
is realized as an enclitic suffix in most Anatolian dialects. Although researchers
seem to differ with respect to the degree of the influence, they converge on the
view that it is a matter of language contact, and that at least the development
and the proliferation of the obligatory copula is under the influence of the neighboring languages – Turkish, Kurdish, Zazaki and Aramaic – which all have copulas in nonverbal clauses (see Lahdo 2009; Grigore 2007b; Palva 2011; Talay 2007; Jastrow 2011a; Akkuş 2016; 2017; Akkuş & Benmamoun 2018, for more discussion and illustrations).

Although the copula forms themselves are not imported, the way they are used in Anatolian Arabic is exactly the same as it is in Kurdish, Turkish and Ṭuroyo (Aramaic), which have copula in the present tense. The copula is placed after the predicate (examples from Grigore 2007b).

(12)  a. Kurdish
      bav-ê min şivan-e
      father-ÆZ poss.1sg shepherd-cop.3sg
      ‘My father is a shepherd.’

      b. Turkish
      baba-m çoban-dır
      father-poss.1sg shepherd-3sg
      ‘My father is a shepherd.’

      c. Ṭuroyo
      bab-i rə𬶐yo-yo
      father-poss.1sg herder-3sg
      ‘My father is a herder.’

Some examples from Anatolian Arabic are illustrated in (13).12

(13)  a. Kinderib Arabic (Jastrow 1978: 131)
      maliḥ-we
      beautiful-3sg.m
      ‘He is beautiful.’

      b. Sason Arabic
      raھw-ìn nen
      sick-pl 3pl
      ‘They are sick.’

---

12It should be noted that the copula is not necessarily realized as an enclitic in some dialects. For instance, in the dialect of Siirt (Jastrow 2011a) the copula precedes the predicate. Moreover, the copula is identical to the personal pronoun in Siirt, whereas other Anatolian varieties use the shortened version of the pronoun in the 3sg and 3pl. See Akkuş (2016) for some discussion.
c. Daragözü Arabic (Jastrow 1973: 40)
   ṃā ḥāš-nā
   ISG good-1SG
   ‘I am good.’

In negative sentences as well, the same order of morphemes is attested. The negative morpheme (and the copula if there is one) follows the predicate in the neighboring languages, as the sentences in (14) show.

(14)  a. Turkish
   hasta değil-ler
   sick NEG.COP-3PL
   ‘They are not sick.’

b. Kurdish
   kemal xwendekar nīn-e
   Kemal student NEG-COP.3SG
   ‘Kemal is not a student.’

c. Zazaki
   cinya niwaş ni-yo
   child sick NEG-COP.3SG
   ‘The child is not sick.’

The same order is found in Sason Arabic, in that the neg+COP follows the predicate.13

(15)  Sason Arabic
   nihane me-nnen
   here NEG-COP.3PL
   ‘They are not here.’14

Given that the copula is almost unknown in other Arabic speaking areas (but see Blanc 1964; also Lucas & Čéplô, this volume; Walter, this volume), it is safe to assume that the development of a full morphological paradigm for the copula along with its syntactic function is at least facilitated by contact with the neighboring languages.

13This is not the most common order in Anatolian Arabic varieties, however. For more discussion, see Jastrow (2011a) and Akkuş (2016; 2017).
14In Sason Arabic, the 3pl personal pronoun can be inner or iyen. A shortened version of this pronoun is used both in affirmative, as in (13b) and negative, as in (15), non-verbal clauses.
3.3.2 Light verb construction

Light verb constructions are another domain where the influence of contact is clearly manifested. In surrounding languages, particularly Turkish, Kurdish and Zazaki, a light verb construction consists of a nominal part followed by the light verb, which is usually ‘to do’ or ‘to be’, e.g. Kurdish *pacî kirin* (lit. ‘kiss do’) ‘to kiss’, Turkish *motive etmek* (lit. ‘motivation do’) ‘to motivate’.

There are a relatively large number of compound verbs constructed with Arabic *sāwa – ysāwi* ‘to do’ and a nominal borrowed from Turkish or Kurdish, as illustrated in (16). In the majority of the cases, the construction is a complete calque of its Turkish or Kurdish counterparts (see e.g. Versteegh 1997; Lahdo 2009; Grigore 2007b; Talay 2007; Jastrow 2011a; Akkuş 2016; 2017; Akkuş & Benameoun 2018 and Biţună 2016 for more examples).

(16) a. Āzǝq/Mardin Arabic (Talay 2007: 184)
   *sāwa brîndâr* ‘to injure’, cf. Kurdish *brîndâr kirin*
   *sāwa gāmērtîye* ‘to act generously’, cf. Kurdish *camērtî kirin*
   *sāwa yōt* ‘to mow’, cf. Kurdish *côt kirin*

   b. Tillo Arabic (Lahdo 2009: 202)
   *sāwa yârdəm* ‘to help’, cf. Turkish *yardım etmek*
   *ysāwaw dawām* ‘they continue …’, cf. Turkish *devam etmek*
   *nsayy qaḥwaltə* ‘we have breakfast’, cf. Turkish *kahvaltı etmek*

In Sason Arabic, the default order in this construction has reversed, in that in most cases the nominal is followed by the light verb. Thus, Sason manifests head-final order, undoubtedly due to contact with Turkish and Kurdish. Similarly, the nominal part of the construction can be borrowed from Turkish as in (17), including instances of reborrowing of an originally Arabic word, (17b), or Kurdish as in (18). In fact, the nominal part might also be Arabic, as in (19).

(17) Sason Arabic (Turkish borrowing)
   a. qazan sāwa
   *win* do.prf.3sg.m
   ‘to win’

   b. išāret sāwa
   *sign* do.prf.3sg.m
   ‘to sign’

(18) Sason Arabic (Kurdish borrowing)
   *ser* ası
   *watch* do.impf.1sg-do
   ‘I watch …’
(19) Sason Arabic
   a. gerre/hās ṣāwa
      noise/sound do.PRF.3SG.M
      'to make noise/sound'
   b. šaylə lā təsi, aməl si!
      talk NEG do.IMPF.2SG.M work do.IMPF.2SG.M
      'Don't talk, do work!'
   c. huğüm sinna
      attack do.PRF.1PL
      'We attacked.'

Anatolian Arabic usually resorts to the same periphrastic construction when borrowing verbs from Turkish; it creates a complex predicate, rather than adapting a foreign verb directly to Arabic verbal morphology, a borrowing strategy seen also in the other languages in the region, such as Kurdish, Zazaki. In many cases, the complex predicate comprises of ṣāwa + the Turkish verbal form of the indefinite past (i.e. miş-verb), rather than the bare form of the verb, as illustrated in (20).

(20) Anatolian Arabic (Talay 2007: 184)
    ṣāwa gačənməş 'to manage', cf. Turkish geçinmiş
    başlaməş sawa 'to begin', cf. Turkish başlamış

Despite the widespread use of this process for loanwords, some borrowed verbal forms have been totally assimilated to the Arabic verbal system; the majority of these verbs are formed according to verbal measures (stems) II or III, as can be seen in example (21).

(21) Āzəḫ (examples from Talay 2007)
    Stem II  qappat – ḷqappat 'to close'  cf. Tr. kapatmak
    Stem II  qayyad – ḷqayyəd 'to register'  cf. Tr. kayıt etmek
    Stem III ḷdāyan – ḷidāyən 'to be patient, to bear up'  cf. Tr. dayanmak
    Stem III ḷtelən – ḷîtelən 'to rob'  cf. Kr. talan kirin

3.3.3 Marking of (in)definiteness

In Classical Arabic and in modern varieties spoken in the Arab world, the indefinite noun phrase is unmarked or is preceded by an independent indefinite particle, whereas an NP becomes definite by prefixing the definite article al-/əl-/l-
etc. (Brustad 2000). However, Kozluk–Sason–Muş group dialects have adopted the reverse pattern (see also Uzbekistan Arabic; Jastrow 2005), which is found in the neighboring languages Turkish and Kurdish. That is, the definite NP is left unmarked, and the enclitic -ma is used to mark the indefiniteness of an NP (Talay 2007; Akkuş 2016; 2017; Akin et al. 2017; Akkuş & Benmamoun 2018), as illustrated in (22).

(22) Sason Arabic mara ‘the woman’ > mara-ma ‘a woman’
    bayt ‘the house’ > bayt-ma ‘a house’

The parallel constructions in Kurdish and Turkish are illustrated in (23) and (24) respectively.

(23) Kurdish
    deri ‘the door’ > deri-yek ‘a door’

(24) Turkish
    kadin ‘the woman’ > bir kadin ‘a woman’ (Turkish)

3.3.4 Periphrastic causative

Sason Arabic resorts to periphrastic causative constructions rather than the root and pattern strategy found in other non-peripheral Arabic varieties. In this respect it is on a par with Kurdish, which uses the light verb bidın ‘to give’ to form the causative, as in (25).

    mi piskilet do çekır-in-e
    OBL.1SG bicycle give.PTCP repair.PTCP-GER-OBL
    ‘I had the bicycle repaired.’ (Lit: ‘I gave the bicycle to repairing.’)

Sason Arabic exhibits the same pattern for causative and applicative formation, as shown in (26), which is most likely as a result of extensive contact with Kurdish.15

15Sason Arabic also has another periphrastic construction that is formed with the verb sa ‘to do/make’, which may embed a finite clause (i.a) or a verbal-noun phrase (i.b).

(i) Sason Arabic (adapted from Taylan 2017: 221)
   a. doḥtor maša ali ku isı fiy-u (le yaddel)
      doctor to Ali COP.3SG.M make.IMPF.3SG.M in-3SG.M (COMP make.IMPF.3SG.M)
      sipor
      sports
      ‘The doctor is making Ali do sports.’
(26) Sason Arabic (Taylan 2017: 221)
əmm-a maşa fatma -i addâd-u addil
mother-OBL.3SG.F to Fatma food give.PRFG.F-3SG.M make
‘Her mother made Fatma cook (Lit: Her mother gave food making to Fatma).’

3.4 Lexicon

Anatolian Arabic dialects have borrowed single words and whole phrases or expressions mainly from (Ottoman and Modern) Turkish and Kurdish. The influence of these two languages on the Arabic lexicon is enormous. Aramaic words also survive in Anatolian Arabic to a lesser degree. A few illustrations are given in (27).16

(27) bōš ‘much’, cf. Kurdish boş
bōšqa ‘different’, cf. Turkish başka
rūvi ‘fox’, cf. Kurdish rûvi
hiç ‘none, whatsoever’, cf. Turkish hiç
spor ‘sport’, cf. Turkish spor
magzūn, mazgūn (in Sason) ‘sickle’, cf. Syriac magzūnā; Ťuroyo magzūno

As Jastrow (2011a: 95) mentions, while more Turkish borrowings are found in bigger cities such as Mardin, Diyarbakîr or Siirt, Kurdish borrowings constitute a bigger part of the lexicon of rural dialects. Anatolian Arabic dialects which have preserved the emphatics, pharyngeals or interdentals adapt borrowings into their phonology. For instance, Turkish ḥalbuki ‘however’ is borrowed as ḥālbūki. In most cases, the velar k is turned into the uvular q, e.g. čaqmāq ‘lighter’, cf. Turkish čakmak. Also, Kurdish feminine nouns (and even some Turkish nouns) are suffixed with the Arabic feminine morpheme -e/-a, e.g. tûre ‘shoulder’ (cf. Kurdish tûr).

There are several function words that are copied from Turkish into Arabic, e.g. Turkish ama ‘but’ is realized as hama in Sason, and as ama in Tillo Arabic.

b. aya sa hazd haşiš
headman make.PRFG.M cut.INF grass
‘The village headman had the grass cut.’

Although the origin of these constructions is not clear, they do not appear to be contact-induced.

16See Vocke & Waldner (1982: xxxix–li) for detailed statistics on Kurdish/Turkish/Aramaic loanwords. See also Lahdo (2009: 207–223) for a comprehensive glossary of Turkish and Kurdish loanwords in Tillo Arabic, most of which are found in other Anatolian Arabic varieties as well.
The conjunction çünkü ‘because’ from Turkish is attested in many Anatolian varieties, with the same function. Lahdo (2009: 179) notes that it expresses causal clauses in Tillo, as in (28), and Bițună (2016: 213) reports the same role for Siirt. Jastrow (1981: 278) and Grigore (2007a: 261) also confirm its existence in Ḥalanze and Mardin, respectively.

(28) Tillo Arabic (Lahdo 2009: 179)

\[
\text{mā āṭaw-nī əzan čünkī ģītu əl-anqara}
\]
\[
\text{NEG give.PRF.3PL-1SG permission because come.PRF.1SG to-Ankara}
\]
\`
They did not give me permission because I had come to Ankara.
\`

Procházká (2005) notes that particles such as bile < bile ‘even’, or zātan < zaten ‘already’ in the Adana region are also borrowed from Turkish (see also Isaksson 2005).

4 Conclusion

This chapter has dealt with contact-induced changes in the Anatolian Arabic dialects. We have seen that Anatolian Arabic has been primarily in contact with Turkish, Kurdish and Aramaic, and the influence of these neighboring languages on Anatolian Arabic is evident. We have surveyed some contact-induced changes at the phonological, morphological, syntactic and lexical level.

Mardin and Siirt dialects have been covered much more comprehensively than other dialects in the literature. It is desirable to have more comprehensive investigations carried out for the dialects around the Bitlis, iliMuş and Diyarbakır areas. This research has the potential to fill the gaps in our current state of knowledge about these dialects.

Similarly, in terms of the linguistic features investigated, phonological and morphological properties (along with lexicon) have received more attention in the literature, whereas syntax, in particular, has been understudied. This situation, however, might change once we are at a point where we have enough recordings and transcriptions to investigate syntactic properties of the dialects.
Further Reading

- Jastrow (1978) is a seminal work, which provided the classification for Anatolian Arabic varieties.
- Jastrow (2011a) is a concise, yet comprehensive encyclopedia entry on characteristic features of Anatolian Arabic.
- Talay (2011) is a good source for an overview of Arabic dialects in the Mesopotamian region.

Acknowledgements

I would like to thank Stephan Procházka and Mary Ann Walter for sharing their work, and to Stephan Procházka for reading another version of the paper, which also helped with this version. Thanks to Gabriel Biţuţa for directing my attention to several important sources. I also thank the editors Chris Lucas and Stefano Manfredi for their help and patience. All remaining errors are of course my own.
